

ULVAVAC SPRAY VACCINATOR

A hand-held sprayer used to mass vaccinate birds housed on the floor and in cages.

THE ULVAVAC

uses a process called Controlled Droplet Application (CDA) by utilizing a spinning atomizer disc to accurately control the uniformity of the droplet size.

It is lightweight, portable, user-friendly, and quiet thereby reducing stress on the birds during operation.

Up to 30,000 broilers in 20 minutes

5.5 kg, 12 lb. with battery and full container

1000 ml vaccine container

12 volts rechargeable battery

2 hours battery consumption

30-150 ml per min flow rate capabilities

60-80 μm droplet size range

3 m, 9 ft. spraying distance

A selection of four nozzles help the operator choose the best one based on the flow rate and their walking speed.

Battery pouch, 12 volt rechargeable battery, and charger

The spinning atomizer disc and the fan disperse the vaccine into the air. This helps to ensure an even vaccine distribution to all of the birds. They can easily be removed to clean.

The UlvaVac can fold and safely be transported or stored in a plastic bucket.
